

APPENDIX 34—DESIGNATED ROW CORRIDOR CRITERIA

A transportation and utility right-of-way (ROW) corridor criteria determination would be undertaken subsequent to the issuance of the Record of Decision (ROD) for this plan.

ROW DEVELOPMENT AND SELECTION CRITERIA

When a new proposal is received subsequent to the designated corridor criteria determination, the purpose would be evaluated based on the criteria listed below. Each proposal would be examined on a case-by-case basis to determine if it meets the corridor criteria. The type, compatibility, proximity to other ROWs, extent/area, and mitigation measures for a ROW would be identified prior to granting additional ROWs within any designated corridor.

The following items would be determined for each designated corridor:

- Types of ROW facilities to be allowed
- ROW activities to be allowed or restricted
- Exact location and width available within the corridor
- Non-ROW activities to be allowed, restricted, or prohibited within the proposed ROW corridor or ROW use area
- Nonstandard or administrative (i.e., resource protection) terms and conditions to be applied to specific ROW facilities that subsequently may be located within the ROW corridor or ROW use area
- Ancillary facilities and “perpendicular” access needed to efficiently gain access to the ROW corridor or ROW use area.
